

# ROEST

## Product development engineer

ROEST seeks a highly motivated person for the position as a product development engineer. We are looking for someone who can be an integral part of our development team, working on cutting edge technology for the coffee industry. Join us as we are taking coffee roasting into the new age of technology!

### Why work for us?

At ROEST you will get the opportunity to make an impact, and design solutions that will revolutionize the coffee industry. We are a small team, so your contribution will quickly influence our company and our products. We are currently scaling up the production of our first product, while at the same time developing a new production coffee roaster. You will be part of what we aim to be an incredible journey to make smart and efficient solutions for the coffee industry.

### Responsibilities / This is your job

- Make significant contributions to design, development and validation of new products
- Work closely with our development and production team to solve problems and establish best practices
- Using Solidworks to model and analyse concepts, as well as other tools to facilitate and expedite the design process as needed
- Delivering on and understanding the basis of project management, risk assessment, design for manufacture and assembly, problem solving techniques
- Research materials and engineering solutions
- Assist in producing and testing prototypes
- Provide technical support to customers and internal teams on new products when needed

### Qualifications / This is you

- Ideally educated to degree level in Product Design/Industrial Design/Mechanical Engineering (or similar)
- Previous experience in product development
- Experience with a variety of materials and manufacturing processes (injection moulding, CNC, fabrication, die casting etc.)
- Previous experience in 3D CAD modeling

- Ability to cooperate as part of a dynamic team and perform as part of a group before your individual contributions
- Strong written and verbal English communication skills

### What do we offer?

- We offer a chance to work in a team oriented working atmosphere in an enjoyable and functional office space
- Competitive salary
- The thrill of getting into a fast-growing startup early. There is a ton of opportunity to grow as the company does
- 25 days holiday plus bank holidays
- Company pension scheme
- Employee stock program

### Who we are

Our vision is to make premium coffee accessible to everyone. To succeed we are going to challenge every part of the coffee value chain – from production to roasting and brewing. We have launched our first product, an award-winning professional sample roaster for quality control. Our next product is under development and now we need the right person to help us finish it.

ROST is developed and produced in Norway, but our market is global. We have produced over 500 coffee roasters sold to customers in more than 50 countries around the world. Our team is also international, represented by several different nationalities.

We can promise amazing coffee every day with colleagues that is a great fun to work with.

### Location

Our office is based in Bryn, Oslo, where we also develop and produce our products.
